

Land Inventory 2002
Land and Water British Columbia Inc.

In 2002 the Development and Marketing Division of Land and Water BC (LWBC) for the Southern Interior Region implemented a Land Inventory Plan to identify the development opportunities in accordance with LWBC's vision, mission and goals.

Urban Systems Ltd. compiled a complete inventory of all lakes within the Thompson-Nicola Regional District that have been identified for potential recreation property development. The inventory provided a comprehensive analysis of all applicable land use plans including Land and Resource Management Plan (LRMPs), land use plans and lakeshore development guidelines and other applicable studies. Where possible, Geographic Information System (GIS) mapping provided a useful and concise summary of relevant data. The project also involved consultation with Provincial and Federal agencies to identify opportunities and constraints to further development. In addition, Thompson Nicola Regional District (TNRD), Ministry of Sustainable Resource Management and Fraser Basin Council were involved as partners in the inventory exercise.
